President's NOTE

Welcome to the latest edition of **ADVANCED NOTICE**. We are very proud to provide this update on the presentation industry and its new products ... and how they are being integrated into corporate & academic environments.

For over 10 years Advanced has been one of Ontario's leading AV integrators, offering a wide range of presentation products and complete installations. And boy, in 10 years, things have changed!

- Projectors, once the most expensive part of a boardroom, are now four times more powerful, and easily one quarter of the cost. Want a good example? Check out the new Epson PL1715, profiled on page 8 of this newsletter.
- New products (and whole new categories) are rapidly gaining prominence and will soon be part of your development strategy. LifeSize high-definition videoconferencing, Mediasite presentation recorders and interactive tools such as SMART Board interactive whiteboards are examples and are changing the way our customers do business.
- And of course there are vast improvements in collaborative technology as streaming media, video and audio now share the IT infrastructure. This has changed the way many enterprises deploy presentation technology to deliver just in time decisions to the marketplace.

So how does all of this impact your organization? Well you can accomplish more, more effectively and efficiently than ever before. If you work in sales, you can reach more prospects, with a more compelling presentation. If you're in production, you can collaborate, innovate and produce with shorter timelines and smaller budgets. And if you're an owner, executive or shareholder, these improvements will contribute to a better bottom line.

Please enjoy **ADVANCED NOTICE**. It's an exciting time! If you have any questions or comments, feel free to contact one of our sales reps or service engineers, or contact me at mmulford@advanced-inc.com.

Regards,
Mark Mulford
PRESIDENT & CEO

Revolutionary LifeSize Brings Affordable HD to Video Conferencing

There has been a lot of press recently about the resurgence of video conferencing as a critical enterprise communications tool. With new communications standards, compression technology and a decrease in the cost of ownership of broadband connectivity, video conferencing may finally deliver on its early promise.

Remember its early promise? Wasn't it supposed to eliminate the expense of business travel? Facilitate collaboration between teams from around the world? Connect customers, suppliers, partners and colleagues in a cost effective, and efficient manner? Did that happen?

Fast forward to now and welcome to LifeSize High Definition video conferencing. Whereas traditional video conferencing requires a huge infrastructure commitment, dedicated ISDN lines and proprietary tech-

nology on both ends of the conference, the HD conference of today is easy to set up, inexpensive, delivers high definition video and sound and is available across existing network infrastructures.

With the revolutionary and highly praised LifeSize video communications, video conferences are 10 times better with true high definition video resolution of 1280

Google Proves Value of Streaming Media

By now, everyone has heard of Google's acquisition of YouTube, the video streaming website which allows people to watch and share original videos worldwide through the web. So, what is it about video streaming and why were the likes of Google and Yahoo fighting it out to take over this company? Video streaming is definitely not a new technology but the use of this technology is growing rapidly. So what exactly is streaming?

Streaming, or webcasting, is an easy to use and affordable technology for playing audio and video files (either live or pre-recorded) from a web page. A user can view the audio or video files directly from the web server. Because the media is "streamed" users avoid time consuming downloads of large files. Participants can

also watch or listen to a live event remotely.

The most significant, and most exciting, enterprise development is streaming "rich media" which combines audio/video with content from other software applications such as powerpoint, word and excel. This enhanced experience makes streaming media extremely attractive for educational institutions and corporations.

As an example, a video of a university professor can be streamed along with their supporting powerpoint slides, whiteboard notes and other visual references to provide a deep learning experience. In the corporate world, executive briefings can feature live video of the CEO along with supporting charts, tables and other graphics to deliver a more expan-

Take Control of Your AV Assets with Crestron Roomview

Today, many organizations rely heavily on audio and video technologies. As is true with IT infrastructures, AV downtime is not an option. To ensure things move smoothly, a host of new solutions are entering the market. One such product is Roomview by Crestron Electronics. It allows IT administrators to manage AV assets from anywhere in the world and employ the same functionality from network management software tools like HP's Openview. All with the addition of a Crestron media controller and C2enet card.

From a remote support and monitoring perspective this is pretty exciting. Each

individual room can have a corresponding web page setup to allow a manager to help a struggling user and be the first line of support.

The Roomview system can also be programmed to perform such basics as;

- monitoring the hours of use logged on any given projector
- sending a message when the lamp life is low
- powering down projectors on a specific network at a specified hour
- users in a room can send help requests to

the Roomview PC by accessing a touch panel or web browser.

Room Name	Light	System Power	Display Power	Display Usage	Help	Schedule
Corporate Room 101	✓	✓	✓	✓	✓	✓
Corporate Room 102	✓	✓	✓	✓	✓	✓
Corporate Room 103	✓	✓	✓	✓	✓	✓
Corporate Room 104	✓	✓	✓	✓	✓	✓
Corporate Room 105	✓	✓	✓	✓	✓	✓
Executive Conference Room	✓	✓	✓	✓	✓	✓
Florida VTC	✓	✓	✓	✓	✓	✓
Georgia VTC	✓	✓	✓	✓	✓	✓
Germany VTC	✓	✓	✓	✓	✓	✓
France VTC	✓	✓	✓	✓	✓	✓
Spain VTC	✓	✓	✓	✓	✓	✓

In a nutshell, from any PC on the LAN or WAN, Roomview offers a simple "at a glance" view of the entire control system network and the latest version gives the ability to simultaneously view more than 250 rooms from a single screen!

For more information on how AV assets can be centrally managed, call 905-502-1110 or visit www.advanced-inc.com.

AXIS Group Delivers Coast to Coast Service & Support

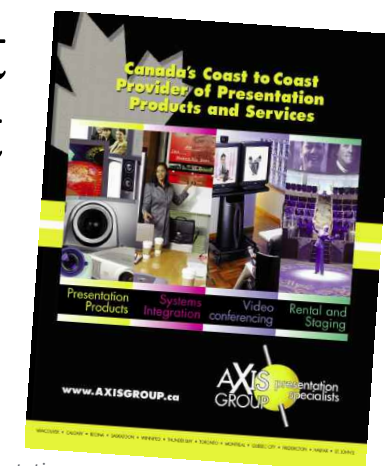

For many national and multinational companies, rapid access to local proAV service and support is critical. This is especially true for organizations that deliver critical presentations, right across the country, in branch offices or off-site facilities.

That's where the national scope of Axis Group Presentation Specialists comes in. Created to provide unparalleled proAV service across Canada, Axis Group is a single point of contact for coast-to-coast supply and integration of presentation technology and services.

An example of Axis Group's national service and support capabilities is demonstrated by the recent agreement with Cisco

Systems. Cisco, with multiple locations across Canada, has many conference and control rooms operating with a wide variety of audiovisual equipment. Looking for a unified resource to provide consistent preventative maintenance and emergency response needs, Cisco looked to Axis group. And with service already performed in Vancouver and Toronto, and new sites to be added in the coming months, this trial agreement has been a real success.

As a founding member of Axis Group, Advanced Presentation Solutions provides local proAV service to business, education, government, retail and religious markets. Our offering includes a full range of presen-

tation products, videoconferencing, design and engineering, installation, consulting, rental and staging, service and maintenance.

For information on our commitment to providing national service and support, visit our website at www.axisgroup.ca or contact your Advanced sales representative at 905-502-1110.

Preferred Suppliers Make a World of Difference

At Advanced, we have rigorously tested presentation technology from the world's best manufacturers. And through this process we have come to trust a small, highly reliable group of companies, that we call preferred suppliers. Their quality products are the foundation of our quality installations. We feel confident selling their products and that makes a world of difference. For a more information on our preferred suppliers, call 905-502-1110.

Advanced First with M-PDP

A commanding presence. That's the holy grail for exhibitors, event producers and advertisers, as increasingly sophisticated consumers become more and more cynical towards multimedia displays. In order to attract attention and to excite, capture and engage walk-by traffic, marketers are looking to innovative, unique products that deliver the elusive "WOW Factor".

In Canada, the best choice is **Infinite Plasma™**, available exclusively from Advanced Products Group. The revolutionary M-PDP consists of bezel-less, high-resolution plasma displays that infinitely connect to any size or shape imaginable. Maximum visibility & minimum space requirements creating the ultimate flexibility for event planners, booth designers, architects and more.

Infinite Plasma™ is comprised of 42" plasma panels that deliver a HD quality resolution and high contrast image with state-of-the-art color reproduction. With minimal depth and weighing less than 60 pounds per panel, Infinite Plasma™ can be wall mounted, suspended from the ceiling or displayed free standing. Preconfigured mounting brackets and stands are available.

"We are very excited to bring this revolutionary display technology to Canada," says Mark Mulford, President and CEO of Advanced Products Group. "Once event planners and their clients get a look at the amazing picture quality and incredible flexibility of M-PDP, they're going to be blown away. And it will be really interesting to see the creative applications of this technology because Infinite Plasma is limited only by one's imagination."

To learn more about Infinite Plasma, call Andrew Salamon at 905-502-1110, or email andrews@advanced-inc.com.

Infinite Plasma: Seamless & Thin

Compared to other video wall options, which are at least 17" deep or bordered with a 1/2" inch seamlines, Infinite Plasma, at just 3" deep and a 1/8" bezel is clearly superior for most applications.

Seamless connections

Conventional M-PDP

New Type Multi-PDP

Cube Type

Infinite Plasma vs LED

Plasma is ideal for indoor displays that include video information. LED is designed for larger displays and is only recommended for very large outdoor use --- but it is far more expensive than plasma and the resolutions supported are relatively low.

FEATURES

- Infinite Plasma™ utilizes an exclusive Dead Free Zone (DFZ) technology eliminating distraction of thick bezels and seam lines.
- RS-232C and optional external TCP/IP network control for remote operation and status monitoring plus a contrast ratio of over 3000:1, 1000 cd/m² and a wide viewing angle of more than 160 degrees.
- Includes a built-in video wall matrix processor that allows the multiplex plasma monitors to display separate computers, composite-video, S-video (Y/C), a component-video or HDTV signals.

Mediasite "rich media" streaming

Continued from page 1

sive and rich presentation. Other uses include streaming live events, seminars and presentations, deploying training videos across a geographically broad user base and cataloging product demonstrations for customer reference.

In several recent installations, our partner, Sonic Foundry, has utilized Mediasite to deliver integrated, and easy to use, rich-media streaming functionality. At York University dozens of classrooms have been outfitted with Mediasite presentation recorders that automatically capture lectures as they are naturally shared. At Sunnybrook and Women's College Hospital, researchers are routinely recording technical briefings, complicated procedures and research findings and delivering them around the world. When and where knowledge transfer happens - in meetings,

training, or class - Mediasite delivers that critical information over the web to the people who need it. Instantly.

So it appears streaming media is here to stay. And with the increased use of

products like Mediasite that allow executives and educators to create and manage affordable multimedia web-

casts, the future is indeed bright. Stay tuned, maybe Sonic Foundry will be the next target for Google?

For more information on how your organization can incorporate streaming rich-media call Victor Janzen at 905-502-1110.

Q&A

Q: We've been reading about how powerful interactive whiteboards are for collaboration. How do we integrate a SMART Board into our existing meeting room?

E.K., Richmond Hill

A: That's a great question. The SMART Board™ interactive whiteboard is a very useful productivity tool for corporations. Collaborative meetings, training sessions and other presentations are all improved by SMART solutions.

There are several ways to integrate a SMART Board interactive whiteboard within your meeting room. These include:

- Front projection SMART Board
- Rear projection SMART Board
- In-Wall Rear Projection SMART Board™
- SMART Board for Flat-Panel Displays
- Sympodium™ interactive pen display

Whichever product meets your needs, you will reap the benefits of SMART's interactive technology products. You won't have to take notes anymore as they are simply recorded and emailed to everyone attending the meeting. You'll have access to dynamic content, gain improved interaction with your audience and deliver better training sessions.

For more information, call 905-502-1110 or visit www.advanced-inc.com.

Teams today need to interact and collaborate to get the job done. With the SMART Board interactive whiteboard, your team can brainstorm, write notes, open multimedia files, visit websites, refine ideas and save decisions – with the files and information they need at their fingertips.

But big business benefits don't have to come with a steep learning curve. If you can use a computer, you can use a SMART Board interactive whiteboard.

Find out more about the world's leading interactive whiteboard, and leverage the intelligence of your team.

Share your ideas. **Intelligently.**

With the SMART Board™ 600 series interactive whiteboard

WE'VE TESTED IT!

Simple to use web conferencing software

The concept of virtual teams combined with on-demand information and real-time communication is driving an increase in conferencing via the web. In this issue of Advanced Notice we profile Bridgit™ conferencing software, from SMART Technologies Inc.

Bridgit is PC connectivity software that provides a quick and easy way to share voice, video and data over the Internet.

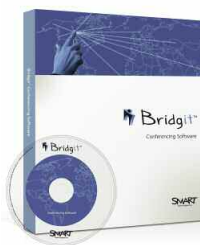

Users simply create a conference by opening Bridgit software and assigning a name and a password. Then they invite participants by email who, once they join are

ready to begin sharing voice, video and data in a secure and reliable environment. No installation is required.

Industry guru Gary Kaye of Kaye Consulting emphatically asserts, "this blows away WebEx and all the over-bloated, over-engineered Internet-based web conferencing software. Bridgit is all you really need for over 95% of those applications and unlike all of the others, it's simple to use and works 100% of the time."

The unique features of Bridgit include:

- Desktop sharing – Share desktops instantly and alternate desktop control with ease. As well, several people

can write over information on a shared desktop at the same time.

- Integrated audio and video – View video from as many as four participant sites. The built-in VoIP feature allows participants to be heard without the need for an additional audio

conference bridge.

- SMART Board integration – If you already have a SMART Board™ interactive whiteboard, you can write directly into an open Notebook file.
- Firewall compatibility – The software is designed to work with corporate firewalls, which makes it simple to set up a conference because no special configurations are required.

For more information on how you can improve your collaboration with Bridgit conferencing software, call 905-502-1110 or visit www.advanced-inc.com.

We've been working with ... Morguard

Who:	Morguard
What:	Multipurpose Presentation Area
Location:	Mississauga
Completed:	2006
Role:	Consultation, Design & Installation

About Morguard:

Morguard is one of Canada's largest integrated real estate companies with a diversified portfolio of more than \$6.4 billion in properties owned or under management. They offer investment and property management services across all asset classes: office, retail, industrial, and residential.

The situation:

Morguard had space on the 11th floor of their head office where they wanted to create a multipurpose presentation environment that could be used for a number of roles including: corporate functions, intimate meetings and a lounge area for employees to relax and be entertained.

The Advanced solution:

The Advanced team created a solution that divided Morguard's space into 3 key areas:

- a multimedia lounge for employees featuring high definition plasma displays and wide dispersion sound system
- a corporate presentation area that can accommodate up to 200 people featuring a motorized screen, computer projection system, custom podium with control system and sound system
- a smaller meeting area with video conferencing equipment for private meetings.

Installation details:

- For the video conferencing capability we installed a Polycom video conferencing system VSX 8000
- For the corporate presentation area and multimedia lounge we installed a complete presentation system including projector, motorized screen, full audio system and multiple plasma monitors
- All AV equipment was connected to an easy to use Crestron Room control

system that controls the projection system, the screen, the audio functions, DVD/VCR, cable TV and the video conferencing system

- The project was finished in 2 weeks and has been well received by employees and management.

For Rent: Video Conferencing Room

Can you really afford two days out of the office for a two hour meeting that occurs once a year? That's the typical price for many people who have to travel to distant locations for a meeting that lasts less than half a day. Your time is valuable, not only to your company but to you as well. The uncertainty and frustration of business related travel makes it difficult to manage costs, productivity and personal energy. Videoconferencing offers an effective and efficient solution to these problems.

But do you need your own dedicated facility, or do you simply need access to one from time to time? That's a question facing many business professionals.

The solution? Rent a video conferencing room whenever the need arises.

Advanced Presentation Solutions has a

fully equipped videoconferencing room available to meet the varied needs of the business community. Our Lifesize HD video conferencing system is state-of-the-art, offering high-definition video resolution and outstanding sound. A wireless remote control with a graphical user interface makes the systems as easy to use.

The costs of renting a videoconference room are much lower than a business trip. And the increased productivity is huge. Our rates run from \$200 - \$250 per hour for use of the room and equipment plus long distance phone charges, if any. For longer conferences, or more frequent usage, rates are negotiable.

Service is available Monday through Friday, 8 AM to 5 PM. Special arrangements can be made for conferences that need to

SPECIFICATIONS

- Lifesize video conferencing equipment with premium quality audio and HD video
- Private meeting room with seating for 8 people
- Leading display technology 42" M-PDP HD plasma display
- Videoconferencing for speeds up to 2 Mbps via IP
- Point to point conferencing
- Room rentals start at \$200 per hour, plus relevant long distance charges

take place at other times. Advanced Presentation Solutions technical support staff will assist you in all aspects of the videoconference.

For information contact Andrew Salamon at 905-502-1110.

Need Replacement Projector Lamps? Talk to the Lamp Experts at Advanced.

The heart of modern projectors, whether LCD, DLP or LCOS, is the lamp. And while huge improvements have been made in the electronics of projectors, so too has been the progress in design and material used in lamps.

Technically a high intensity discharge lamp (HID), today's modern projector lamps are more efficient than fluorescent and incandescent lamps and operate under high temperature and pressure. They are most commonly metal halide which gives a white (even bluish) picture of up to 3,500 lumens. As lamp usage increases, lamp output diminishes, dropping by approximately 50% after 1,000 hours for most lamps.

Modern projectors are increasingly robust and reliable so most users should expect to replace lamps several times over the life of their projector. With lamps in the \$400-\$500 price range, this is not an insubstantial event. Then of course the opportunity cost of "losing" a lamp minutes before that key presentation (not least in stress levels) can of course be very high.

So it makes good commercial sense to do everything possible to both maximize the life of one's projector lamp as well as be prepared for its inevitable replacement.

Lamp Care - Important Tips

- Never let the projector overheat
- Remove dust from filters and airflow ducts regularly
- Follow user manual instructions for power-down (run the fan after the lamp is powered-off)
- Never touch a bulb with your fingers – always use a cloth for handling
- Hot elements are delicate – avoid moving the projector while hot
- As "prevention is better than cure" take out a preventative maintenance contract on all projectors.

Lamp Replacement Options:

- Lamp Module (lamp, housing and reflector). A module is a complete unit that can be installed without technical knowledge in a few minutes. - *The best option.*
- Lamp only (... plus a screwdriver!). A lamp only replacement involves re-seating the lamp in the old housing – not an easy job for the non-expert that can lead to damage. - *If in doubt, we always recommend purchasing replacement modules.*
- Original manufacturer replacement. Modules supplied by the original manufacturer of the

projector. An obvious and safe choice. - *Advanced supplies original lamps for all projectors used in Canada.*

- Compatible Lamp. There are a growing number of these on the market, often at bargain prices, but great caution is needed. Non-branded lamps are often of unknown manufacturing standard (ie: no recognized accreditation e.g. ISO9001). Warranties are limited or non-existent, and performance can be variable. - *Advanced does not recommend the use of these products.*
- Branded Compatible Lamps. Slightly cheaper than original product while maintaining the same quality. Branded Compatible Lamps are manufactured to ISO9001 standards, do not infringe copyright and carry full warranty. - *Advanced is enthusiastic in endorsing these Branded Compatible Lamps as an alternative to original product.*

Whether you're looking for optimum lamp care regime or a cost effective replacement strategy, Advanced can help. We have the largest selection of replacement lamps in Canada, and can supply 99% of all lamps in production. We offer lamp installation services and full preventative maintenance services on all AV equipment (including lamps). Call 905-502-1110 or visit www.advanced-inc.com.

 **build**
power into the system.

Visual Systems is a division of NEC Solutions (America), Inc. ©2006 NEC 110511

Don't be limited by your installation projector.

Finally, all of the power of an installation projector without the limitations. Go ahead. Place the NP at a crazy off-angle. Vertical and horizontal lens shift and 3D Reform with geometry correction give you placement options like never before. A comprehensive input panel including DVI with HDCP ensures compatibility with cutting-edge devices of today and tomorrow. The NPs have brightness to spare. With 3500 and 4000 lumens respectively, the NP1000 and NP2000 deliver powerful images bright enough for most any application.

PROJECTOR REVIEW EPSON 1715

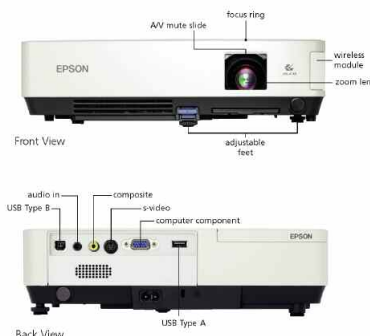

Epson has set another new standard for ultraportable projectors with the release of the very impressive EMP-1715. Weighing a mere three pounds, the new EMP-1715 is not only extremely light but has a feature set that outshines its nearest rivals.

The EMP-1715 delivers 2700 ANSI lumens with an XGA native resolution. It is full HDTV compatible accepting all HDTV standards 480i, 480p, 720p and 1080i. It has a warm-up time of only five seconds and can project a 60 inch image from 7 feet away. The Instant Off allows it to be completely off after only 10 seconds.

The EMP-1715 offers the flexibility you need in the classroom or the boardroom with USB connectivity and multiple computer inputs. It can also operate without a PC. That means anything that you have saved on a USB flash drive (like a picture or video), can be projected by the EMP-1715. Even more impressive is its ability to use a USB memory key, so your files can be directly loaded onto the projector.

In a novel application, the EMP-1715 connects 2 computers, one via standard

EPSON® EXCEED YOUR VISION

USB 2.0 and another via VGA cable, for multiple source presentations.

Also, the EMP-1715 has convenient wireless capabilities. It is compatible with 802.11 a/b/g-compliant devices, which means you can stream movies in MPEG2 format on it. All of this is under the best wireless security abilities available today.

And finally, the EMP-1715 has a unique ability to handle four screens simultaneously.

For more information on the EPSON EMP-1715 or other units, call 905-502-1110 or visit www.advanced-inc.com.

EPSON 1715 BY THE NUMBERS

- 1024 x 768 LCD

- Native 4:3 Aspect Ratio (support 16:9, 5:4)
- USB 2.0 connector type B (for mouse, keyboard & video display)
- USB connector type A (for DSC, USB memory)
- Component / Composite / S-Video Inputs / Mini DIN
- HDTV Home Theatre Ready
- Auto Keystone Correction
- Weight: 3.7lbs
- Dimension (WxDxH) 10.7" x 7.6" x 3.1"
- 3-chip engine

LifeSize Video Communications

Continued from page 1

x 720 pixels at 30 frames per second at 1 Mbps. At lower bandwidths the experience will still be vastly improved versus traditional VC with DVD quality at 512Kbps and Cable TV quality at 384Kbps. Audio is also improved, with integrated super wide-band audio up to 16kHz. Plus there are a whole host of other features including the benefit of running LifeSize on your existing IT infrastructure. See side bar for other technical features.

Companies now benefit from the power of face-to-face communications. Facial expressions and body gestures are registered and provide invaluable context to verbal communications. Participants are more actively engaged, without distractions, and meetings are more efficient and effective.

LifeSize Securely Traverses Firewalls

With the growth of IP communications, video calls passing through a network firewall required opening and closing communication ports, thus leaving networks vulnerable to possible attacks.

HD RESOLUTION: 1280 x 720 resolution, 30 FPS (10x FCIF)

HD AUDIO: Fully integrated super wide-band speaker phone provides up to 16 kHz audio

STANDARDS-BASED: H.264 and H.263 for interoperability with multi-vendor systems

DUAL STREAMING: H.239 compliant for picture in picture or 2 separate images

PLUG & PLAY: Complete system with HD codec, speakerphone, camera and wireless remote

TOTAL CONNECTIVITY: to IP networks up to 2.5 Mbps and ISDN/PRI and BRI

For more information on how your organization can integrate LifeSize video conferencing, call Victor Janzen at 905-502-1110.

With LifeSize video communications this vulnerability is plugged with LifeSize Transit™, a complete firewall and NAT traversal solution. The result is secure, simple to use Global IP video communications that do not place networks, data or business at risk.
